Solo developer — ShaumneGames

The hook

You land on Mars with one solar field and a skeleton crew. A few hours later the lights never go out.

- **Never left waiting.** Tap to push output, speed it up, or close the app — production keeps running offline.
- **Six worlds, six hazards.** Mars, Europa, Titan, Venus, Io, Callisto. Sandstorms, ice sheets, sulphur ash. Shields, drilling order and adaptation tiers decide whether the colony survives.
- **Prestige with a real ending.** Reset for Dark Matter, climb a 16-node tree, reach the Singularity — an uncapped final layer.
- **A story, quietly.** Twelve "Signals from Earth" letters and mission logs give the grind a reason.

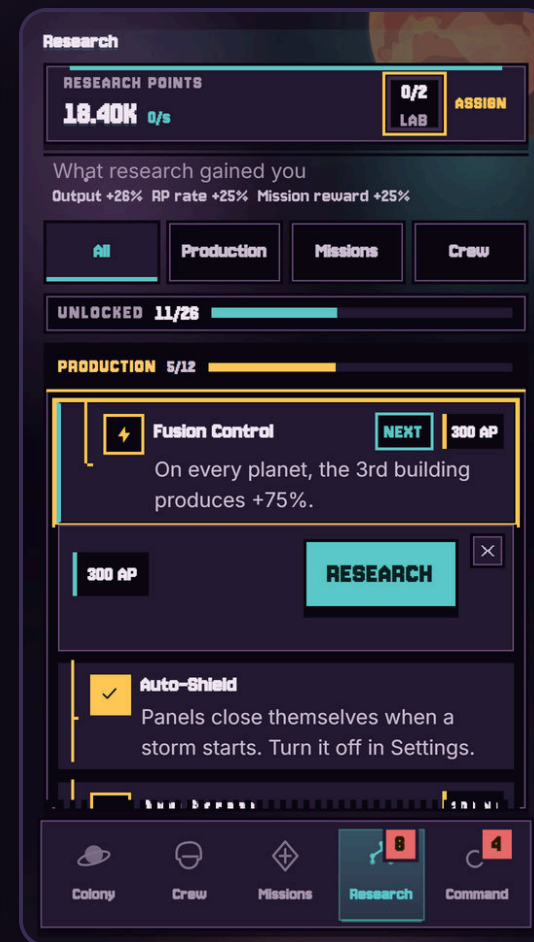

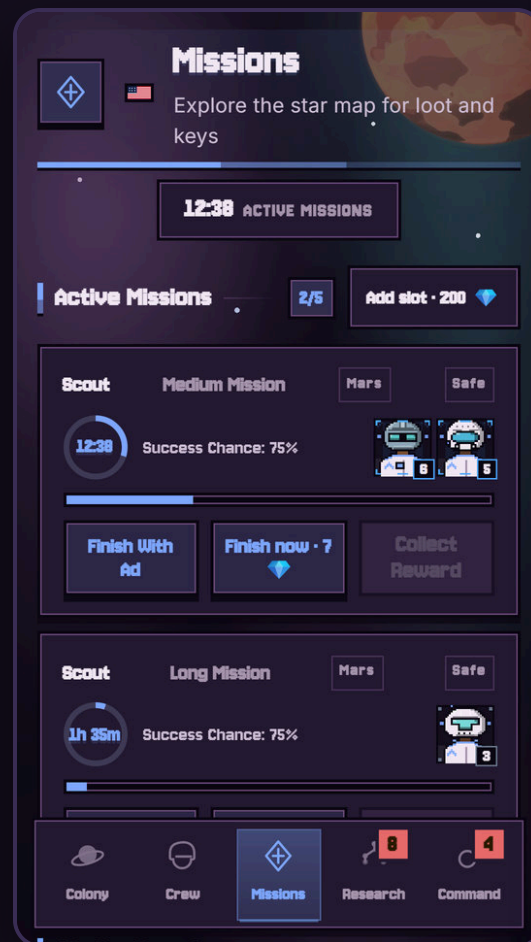

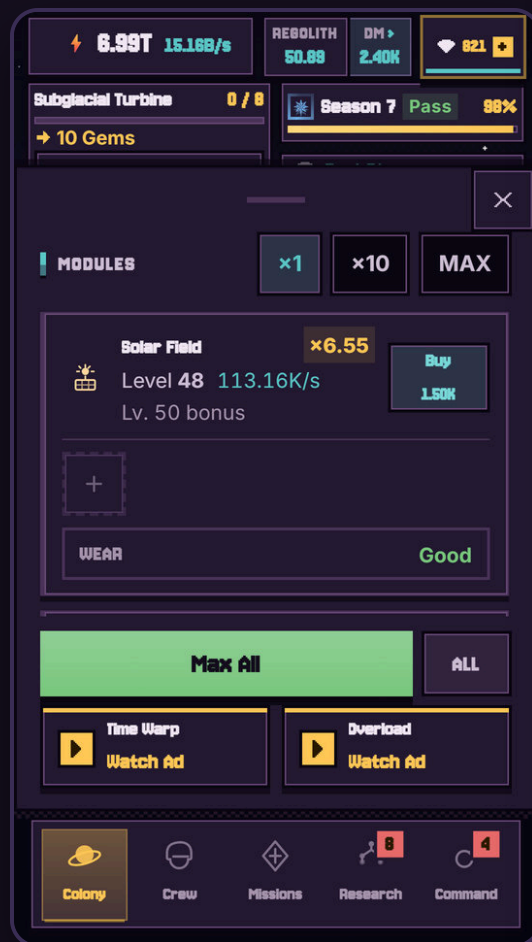

Core loop and depth

LOOP

Build modules → produce → boost or go offline → send crew on missions → research → unlock the next world → Prestige.

SYSTEMS

- Five modules per world, each paying for the next.
- Crew of four classes: assign, level up, send on scouting, salvage and rescue runs.
- 26-node research tree; seasons with rotating goals.

Craft and technology

- **Hand-drawn pixel art** with 70 procedurally assembled sprites, a full day/night cycle and sky events (meteor showers, auroras, storms).
- **60 fps on low-end devices** via adaptive resolution — measured, not assumed.
- **Deterministic engine** (seeded RNG, injected clock) backed by 2,700+ unit tests and end-to-end tests on phone and tablet layouts.
- **Cloud save** with server-side validation rules; offline progress reconciles on return.
- **Modern Android:** targetSdk 36, edge-to-edge, predictive back, themed icon, Android 12 splash. **iOS:** iPhone + iPad, iOS 18 icon variants, haptics, in-app review.

3

layout modes: phone / tablet / dock

Built for large screens

Three layout modes: phone portrait, tablet (≥ 600 dp) with a persistent buildings panel, and dock/landscape (≥ 900 dp) with a left rail, the scene and a right panel. Resizable activity, no orientation lock on tablets, iPad native target.

Player-first by design

FAIRNESS

- No pay-to-win, no paid randomness, no loot boxes.
- Subscription terms shown next to the button, restore purchases one tap away.
- Rewarded ads are optional; kids never see ads or analytics.

RESPECT FOR ATTENTION

- Notifications off by default, asked in context, max two per day, no guilt-trip copy (enforced in code).
- 12-step skippable tutorial that never soft-locks.

PRIVACY

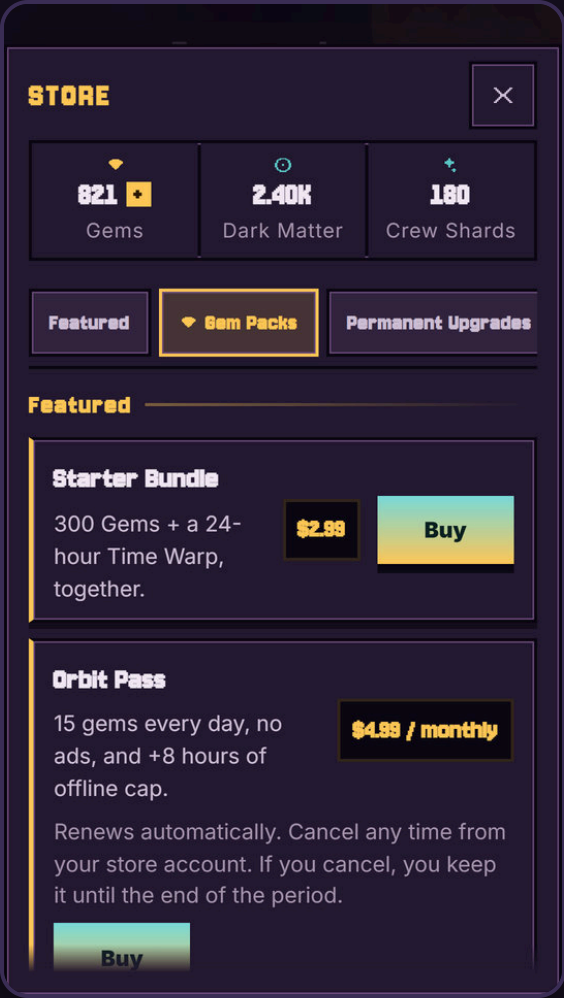

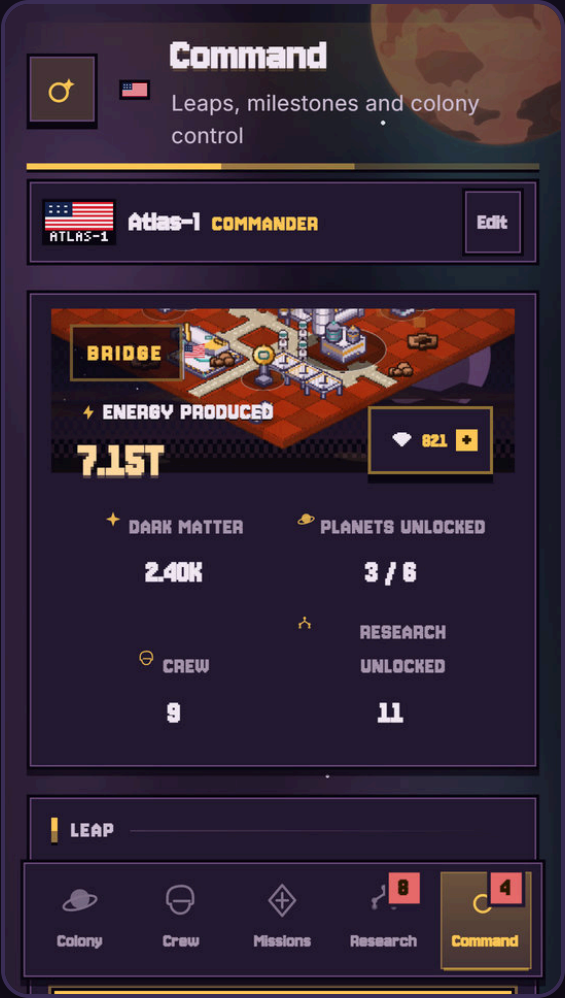

- Age gate → consent → ATT layered flow; minimal permissions.
- Anonymous accounts by default; privacy policy in EN/TR/JA.

ACCESSIBILITY

- Full reduced-motion support; WCAG AA contrast gate fails the build.
- Three text sizes, screen-reader live summary of the scene, colour-blind-checked palette, 44 px touch targets, axe-core scan in CI.

Launch plan

Platforms	Google Play (phone, tablet, foldable) and App Store (iPhone, iPad) — simultaneous launch
Status	Closed test on Google Play since 28 Aug 2026; TestFlight build in testing
Target launch	Mid-September 2026, right after the closed-test period
Desired featuring	From early November 2026 (Indie Games Corner / New Games)
Languages	English, Turkish, Japanese at launch; Spanish, Portuguese (BR), German planned
Markets	Türkiye, United States, United Kingdom, Japan first; worldwide availability
Monetization	Free + IAP (13 products, 3 entitlements incl. a subscription) + optional rewarded ads
Live ops	Seasons every 2–4 weeks with Play Promotional Content and Apple In-App Events; reviews answered within 24 h

Team and contact

ShaumneGames — solo developer studio (Emrecañ Çetinkaya), no outside investment. Everything from engine to pixel art, localisation and store assets is in-house, with a heavy automated test and accessibility pipeline so a one-person team can ship like a studio.

- Contact: shaumnegames@gmail.com
- Privacy policy and support: <https://shaumne.github.io/uzay-kolonisi-gizlilik/>
- Google Play package: com.shaumnegames.uzaykolonisi

Thank you for considering Space Colony: Idle for featuring.
